1.1 Simple Animation

1. Animation

We can use `#pause` to display something later.

Just like this.

Meanwhile, we can also use `#meanwhile` to display other content synchronously.

1. Animation

— 1.1 Simple Animation

1. This is a speaker note.
2. You won't see it unless you use `config-common(show-notes-on-second-screen: right)`

1.2 Complex Animation

1. Animation

At subslide 1, we can

use `use` for reserving space,

use for not reserving space,

call `#only` multiple times $\times$ for choosing one of the alternatives.

1. Animation

— 1.2 Complex Animation

1.2 Complex Animation

At subslide 2, we can

use `#uncover` function for reserving space,

use `#only` function for not reserving space,

use `#alternatives` function ✓ for choosing one of the alternatives.

1. Animation

1. Animation

— 1.2 Complex Animation

1.3 Callback Style Animation

1. Animation

At subslide 1, we can

use `useEffect` for reserving space,

use `useEffect` for not reserving space,

call `#only` multiple times $\times$ for choosing one of the alternatives.

1. Animation

— 1.3 Callback Style Animation

1.3 Callback Style Animation

1. Animation

At subslide 2, we can

use `#uncover` function for reserving space,

use `#only` function for not reserving space,

use `#alternatives` function ✓ for choosing one of the alternatives.

1. Animation

— 1.3 Callback Style Animation

1.3 Callback Style Animation

1. Animation

At subslide 3, we can

use `#uncover` function for reserving space,

use `#only` function for not reserving space,

use `#alternatives` function ✓ for choosing one of the alternatives.

1. Animation

— 1.3 Callback Style Animation

1.4 Math Equation Animation

Equation with pause:

$$f(x) =$$

Here,

1.4 Math Equation Animation

Equation with pause:

$$f(x) = x^2 + 2x + 1$$
$$=$$

Here, we have the expression of $f(x)$.

1. Animation

1. Animation

— 1.4 Math Equation Animation

1.4 Math Equation Animation

Equation with pause:

$$\begin{aligned} f(x) &= x^2 + 2x + 1 \\ &= (x + 1)^2 \end{aligned}$$

Here, we have the expression of $f(x)$.

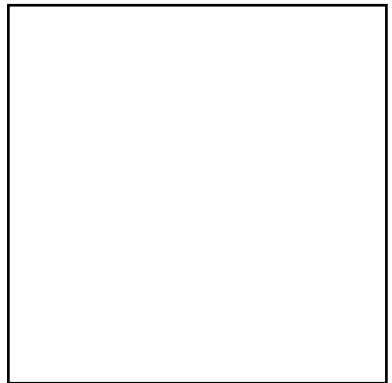

By factorizing, we can obtain this result.

2. Theorems

2. Theorems

—

2.1 Prime numbers

2. Theorems

Definition 2.1.1 A natural number is called a *prime number* if it is greater than 1 and cannot be written as the product of two smaller natural numbers.

Example. The numbers 2, 3, and 17 are prime. Corollary 2.1.2.1 shows that this list is not exhaustive!

Theorem 2.1.2 (Euclid) There are infinitely many primes.

2. Theorems

— 2.1 Prime numbers

2.1 Prime numbers

2. Theorems

Proof. Suppose to the contrary that $p_1, p_2, \dots, p_n$ is a finite enumeration of all primes. Set $P = p_1 p_2 \dots p_n$. Since $P + 1$ is not in our list, it cannot be prime. Thus, some prime factor p_j divides $P + 1$. Since p_j also divides P , it must divide the difference $(P + 1) - P = 1$, a contradiction. $\square$

Corollary 2.1.2.1 There is no largest prime number.

Corollary 2.1.2.2 There are infinitely many composite numbers.

2. Theorems

— 2.1 Prime numbers

2.1 Prime numbers

2. Theorems

Theorem 2.1.3 There are arbitrarily long stretches of composite numbers.

Proof. For any $n > 2$, consider

$$n! + 2, \quad n! + 3, \quad \dots, \quad n! + n$$

2. Theorems

— 2.1 Prime numbers
